SKILLS

Programming Languages: Python, SQL, TypeScript, JavaScript, R, VBA, DAX

Tools & Technologies: Power BI, Excel, Power Query, Databricks, Salesforce, SharePoint, React, Node.js, Express, Git/GitHub, Power Automate, Zod

Core Competencies: LLM-supported development, workflow automation, data visualization, forecasting, process improvement

Professional Skills: Stakeholder communication, analytical problem-solving, leadership, adaptability

Languages: English, Hindi, Spanish

EDUCATION

University of Waterloo

Bachelor of Applied Science in Management Engineering

Cumulative GPA: 3.9/4.0 (89.48%) | Dean's List: F2024, W2025

Waterloo, ON, Canada

September 2024 – Present

EXPERIENCE

Brookfield Asset Management

Incoming Data Engineer, Data Analytics and Automation

• Incoming Fall 2026 Co-Op

Toronto, Canada

September 2026 – December 2026

Manulife Wealth

Data Analyst, Retail and Wealth Operations

- Built scalable, centralized **Power BI reporting infrastructure** by integrating **Salesforce** and internal operational data through **Databricks SQL**, giving leadership a unified view of workload, productivity, and service trends across Retail and Wealth Operations.
- Developed **drill-through advisor and case analytics** in **Power BI** to surface workload concentration, ownership patterns, and productivity gaps, enabling managers to prioritize resources and support workload management and retention decisions.
- Automated monthly reporting and document review workflows using **Power BI**, **SharePoint**, and **Power Automate**, **reducing manual effort** in recurring slide creation and monitoring **by 100%**.

Waterloo, Canada

January 2026 – April 2026

Manulife

Business Analyst, Department of Regional Transformation

- Designed and deployed a **centralized workforce planning and forecasting framework** by integrating siloed data sources with **Excel** and **Power Query**, enabling leaders to align staffing with demand through a single reliable system.
- Engineered **Excel-based process analysis tools** to classify value-added and non-value-added work and quantify lost capacity, identifying opportunities to improve cost efficiency and workforce utilization.
- Built **forecasting and capacity models** with Power Query, incorporating demand growth, peak workloads, automation impacts, shrinkage, and demonstrated vs. effective throughput, giving leadership quantified multi-year staffing requirements and visibility into operational bottlenecks.

Singapore, Singapore

May 2025 – August 2025

Harmony Meadows Alpaca

Project Team Member – Data Analyst

- Led a project team in developing a **Power BI market research dashboard** by coordinating research, data analysis, and visualization, providing decision support for wholesale expansion strategy.
- Built **automated Excel** and **Power Query pipelines** to clean and integrate **Shopify** sales data with external market benchmarks, enabling Power BI analysis of market size, consumer demand, sales trends, and growth opportunities.

Waterloo, Canada

July 2025 – August 2025

Singapore Police Force

Assistant Group Leader, Public Transport Security Command

- Led and mentored future team leaders through structured training while coordinating patrol operations and incident response, strengthening team readiness and ensuring consistent execution across public transport security operations.

Singapore, Singapore

April 2022 – February 2024

PROJECTS

RecipeFlow | *TypeScript, React, Express, Zod, Tailwind CSS*

June 2026

- Built a **local-first Chrome extension** that extracts recipe content from active tabs and processes it through a **TypeScript/Express** backend, using **Zod** validation to produce reliable structured recipe data for the application.
- Developed a **React/Tailwind cooking workspace** with serving scaling, ingredient tracking, guided steps, timers, shopping lists, and contextual substitutions, consolidating the end-to-end cooking workflow into a single interactive interface.

SnapRSVP | *Python, PyQt6, MSS, Tesseract OCR, PyInstaller*

May 2026

- Built a **macOS RSVP reading app** using **Python**, **PyQt6**, **MSS**, **Tesseract OCR**, and PDF parsing to capture on-screen or document text and display it in a focused overlay, supporting reading speeds of **up to 800 WPM**.

Financial Planning Tool | *Excel, VBA, Pivot Tables, Macros*

November 2024

- Built an **Excel-based financial planning tool** using **VBA automation** and **What-If analysis** to streamline budgeting, expense tracking, and scenario comparison, enabling faster evaluation of financial trade-offs through an interactive decision-support workflow.
